

ABM

Job Costing

OVERVIEW

ABM Job Costing is perfect for any business needing to track time and materials being used on a 'job'. Easily prepare estimates, agree contract values and choose to invoice the customer based on a quoted/contract value or the actual job costs; summarised or in full detail.

Job costs can be split into stages, cost centres and between contract and variations. From a large implementation job through to a small repair job - no job is too big or small! ABM's modular solutions, strength in inventory management and ability to be customised make it a great fit for a wide range of industries including all forms of engineering, services to industry and construction.

Great reporting gives the ability to view the profitability of a single job, a group of jobs through to a branch. Plus, work in progress is fully integrated into the general ledger, so provides accurate profitability monitoring at a company level.

Mobile apps are also available for timesheet and cost entry, taking and storing photos from the field and viewing documents related to the job.

Talk to us today about how ABM can work for your business.

BENEFITS

- » Proactively manage jobs.
- » Timely and accurate job scheduling.
- » Capacity planning/management.
- » Early detection and control of cost overruns.
