

Total Eden confirms that the grass is greener with NETSTOCK

NETSTOCK

Success Story

Challenge

To find a system that enables a move from store replenishment to centrally controlled replenishment

Solution

NETSTOCK was integrated with Pronto, providing the newly established central inventory team with the tools required for central replenishment and distribution

Result

The new structure enabled Total Eden to set and control the desired fill rate per store/DC while maximising their stock turns

Customer

TOTAL EDEN

Industry

Water Management Solutions

Location

Melbourne, Victoria

Total Eden is a leading provider of water management solutions to the Australian and New Zealand region. Their range of products covers irrigation, drainage, plumbing, pumping, water supply & filtration, drilling and dust suppression.

INVENTORY BALANCE AND POLICY MODELS

NETSTOCK's ability to model inventory by desired stock availability targets, before committing to an inventory policy strategy, ensures that inventory is balanced in line with inventory policy.

"The ability of Netstock to manage multiple warehouses, and to set inventory policy that is in line with our company financial and service level targets, has enabled us to gain control over our inventory" explains John Carbonetti, Operations Manager.

"The fact that Netstock is automatically adjusting inventory levels in line with forecasting and supply performance, ensures that we always have the most balanced inventory to support our company goals".

Netstock's ability to manage inventory policy down to item by store has proven extremely valuable for Total Eden.

"Having the right stock in the right place has enabled Total Eden to grow by 16% per annum for the last 2 years"

John Carbonetti,
Operations Manager,
Total Eden
