

ABM

Warehousing

OVERVIEW

ABM's Warehousing module provides logical control and organisation of stock, allowing users to create a hierarchal structure in each warehouse with multiple aisles, levels, etc. and a waiting area for goods not yet put away.

The module allows stock to be easily transferred between bins and locations using drag and drop.

BENEFITS

- » Improve stock organisation
- » Improved accuracy of stock taking
- » Allow integration with barcode scanning system
- » Reduce picking and putting away time by identifying the correct location

FEATURES

TRANSFERS AND STOCK MOVEMENTS

After initially receiving stock, transfers from one location to another within the warehouse or to another warehouse is easily made within the system.

Organise stock to adapt to your changing environments or stock requests.

MULTI-LAYERED STOCK STRUCTURE

The hierarchal structure allows the user to drill down through as many subheadings as desired to organise stock as needed.

VISUAL CONTROL

Visual representation of the warehouse structure allows staff to easily organise and find stock through point-click operation and fast search facilities.
