

ABM

Billfeeds

OVERVIEW

Advanced Business Manager has the capability to automatically extract and process data from your business documents, streamlining administration functions and bringing new efficiencies to ABM users' businesses.

Documents such as supplier invoices, customer orders and remittances can be scanned and uploaded or emailed directly to the system.

The system can be customised for individual business workflows and other manual data entry tasks.

Once a document is uploaded or emailed into ABM, its data will be read and it will be available for review and approval into the ABM database in seconds, with a copy of the original document attached. The service can work with scanned, photographed (great for receipts) or digital documents such as PDF or word documents.

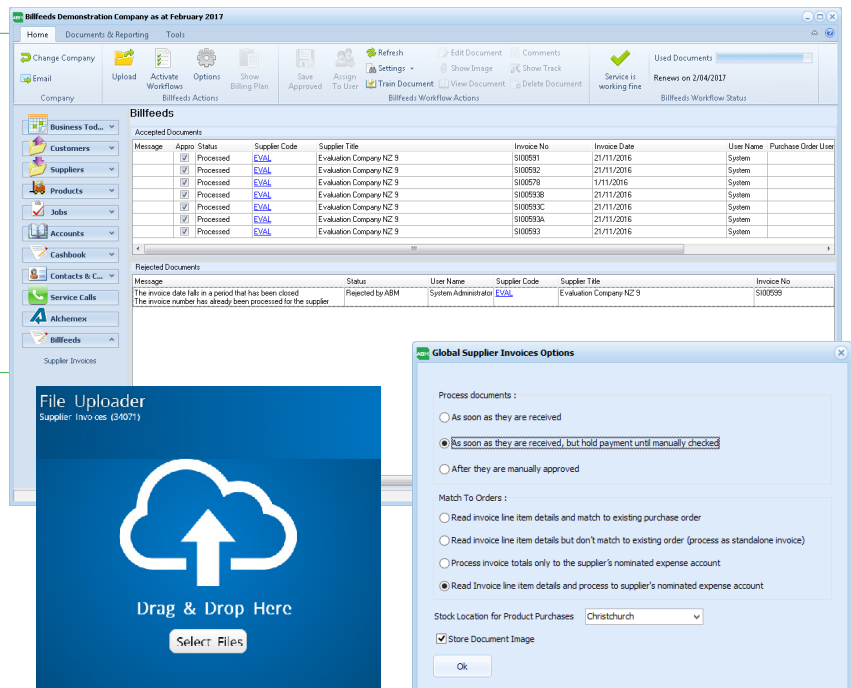

Powered by our technology partner Xtracta's data extraction technology, the feature utilises artificial intelligence (A.I.) to read and comprehend documents in the same manner as humans do. With strong data validation and a powerful machine learning capability, the service is highly accurate and improves over time.

BENEFITS

- » Saves time
- » Reduces overheads
- » Improves accuracy

FEATURES

- » Automated processing
- » Optional approval process
- » Customisable for your business processes
- » Match purchase invoice against order
- » Store document image
