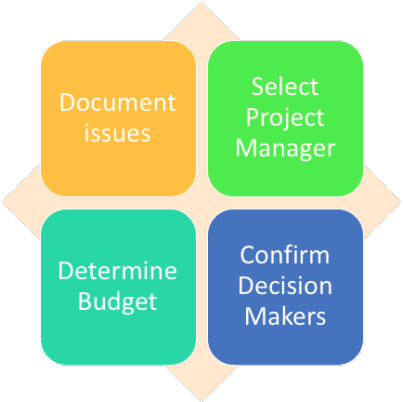
ABM CORE FEATURES FOR TEXTILE AND GARMENTS INDUSTRY

Ajendico
software to grow

SIX STEPS IN THE SOFTWARE SELECTION PROCESS

1. CLIENT BUSINESS ANALYSIS
2. INTERNAL REVIEW
3. FOLLOW UP CALL
4. ONLINE DEMONSTRATION
5. POST DEMO DEBRIEF
6. INVESTMENT SUMMARY

HOW CAN WE HELP WITH A SOLUTION FOR YOUR BUSINESS



Structured Stock	Used to cater for businesses whose stock requires a "segmented" structure. Because of its open design, it is applicable to a variety of businesses in areas such as fashion, timber, sporting equipment, health products, construction materials and more. The module allows the business to set up product types in ABM with each collection containing segments, such as styles, colours, sizes, weights, dimensions, etc.
Pack Sizes	Every product can be sold in multiple pack sizes. This can be used to sell by units, pairs, packs, cartons and inners. Our free format setup allows you to name the packs to suit each individual product.
Barcode Scanning	Every product can have up to five (5) different barcode numbers. In any field that prompts you for a product, you can type or scan any of these barcodes and the system will find and use the correct product.
Manufacturing	Designed to simplify, organise, manage and control every step and element of a business's manufacturing, from planning to production, raw materials to finished goods. Not only does the manufacturing system assist in efficiency and productivity, it also provides the tools for management and operation of many other business activities related to the manufacturing process
Multiple Stock Locations	You can have as many warehouse locations as you need within the core ABM program
Sheduler	Organising call out dates and times is made simple with an intuitive and familiar schedule/calendar system.
Import Costing	An ideal application for users who need to automatically calculate the landed costs of imported inventory. The module is ideal for importers who finalise prices before receiving all invoices all invoices from suppliers for shipment costs. Costs and shipping orders are able to be effectively managed and controlled by separating individual user-defined shipment costs and apportioning them by units of the order. Costs are then tracked and used to control margins over time with further "What if" analysis available to assist with planning.
Stock Management Solutions	Where a product can be purchased from more than one supplier, ABM will keep track of each supplier, that supplier's product code and price for every product in the system
