

SIX STEPS IN THE SOFTWARE SELECTION PROCESS

HOW CAN WE HELP WITH A SOLUTION FOR YOUR BUSINESS

Alchemex

Advanced Business Manager's powerful reporting module, ABM Alchemex, gives your business the competitive edge by enabling quick and easy access to real - time information needed for operations and strategic planning. Effortlessly create reports and analyze data from Advanced Business Manager utilizing the familiar Microsoft® Excel® application

Mobile Timesheets

The ABM Timesheet mobile application allows iOS and Android device users to receive job notifications in the field, and to record time and costs without ever setting foot in the office. This allows staff that are primarily out of the office to record their time using a simple application which automatically uploads data to the system, ensuring timesheets are never lost again.

CRM

ABM Customer Relationship Management (CRM) Software is a powerful customer centric system, aimed at simplifying tasks such as client management, marketing, lead tracking and customer analysis. With full integration of the ABM accounting system, and driven by a robust SQL database, the CRM software module provides a unique platform for accessing and utilising all your customer and supplier information.

Billfeeds

Advanced Business Manager has the capability to automatically extract and process data from your business documents, streamlining administration functions and bringing new efficiencies to ABM users' businesses. Documents such as supplier invoices, customer orders and remittances can be scanned and uploaded or emailed directly to the system.

Document Management and Attachments

ABM Document Management and Attachments provides you with a simple and straight forward method to help users overcome the problem of accessing and storing relevant documents. As more organisations move towards a paper-less environment, the importance of managing electronic documentation both efficiently and effectively, becomes increasingly important.

Branch Management

Assign customers, managers, suppliers, bank accounts, products and jobs to specific branches, allowing only those that are associated to a particular branch's operations to be used. This allows the accounting system to maintain a clear separation of branch transactions, personnel and assets.

Capacity Planning

Through a visual presentation of production schedules and capacity loads, efficient management of production runs can be achieved. Setup availabilities and output potential for work centres, then link production stages to work centres depending on the stage duration and time available. Work centres can be graphed to illustrate usage, which allows users to manage workloads effectively to minimise maintenance and breakdowns. Setting up and monitoring the manufacturing capacity of a plant can produce vital feedback to management in regard to necessary expansion or inefficiencies. recommendations.
