

SIX STEPS IN THE SOFTWARE SELECTION PROCESS

HOW CAN WE HELP WITH A SOLUTION FOR YOUR BUSINESS

Business Intelligence	A data mining application which provides from a "bird's eye view" to an in-depth analysis of your business and its profitability. Identify the strengths and weaknesses of your business through analytical assessment, costs and revenue comparisons, ratio and bottom line analysis, customer and staff performance review, and a range of in-depth analysis tools. With the aim to improve business efficiency and profitability, the module focuses on delivering relevant information through flexible data mining as well as easy to interpret visually attractive interfaces, mobile personnel, logs client service history, and provides customer billing and reporting functionality.
Warehousing	This module allows you to see a visual representation of your warehouses and nominate different bin location in each warehouse. All staff can easily see what stock is available in any location.
Individual Customer Price List	Using our Alchemex Reporting tools, easily automate the process of sending out updated customised price list for each customer. Each one lists all prices including special prices, special discounts, promotional prices, quantity price breaks, pack sizes and foreign currency pricing.
Pick 'N' Pack	Pick 'n' Pack involves identifying the goods to be dispatched, physically picking them from stock or warehouse shelves, wrapping and packaging the goods and producing delivery dockets / invoices. It is particularly useful in warehouse environments where the goods to be despatched are unable to be presented in either order or picking slip sequence. The Pick 'n' Pack method of data entry can facilitate the entry of despatch details in any sequence.
Unpack and Stack	Unpack 'n' Stack is custom designed to facilitate the receipting of purchase orders into the warehouse. This involves identifying the goods as they are unpacked, allowing the store-person to scan individual items regardless of the sequence they appear on existing paperwork.
Customised Sales Order Programs	Would you like to tailor the sales order program to suit your business process? ABM have written many sales order programs to meet your specific needs. Examples include product search by partial descriptions, product lists by group or category, barcode scanning and customised pantry lists for each customer. Tell us about your ideal scenario and we will create the solution for you.
Stock Management Solutions	NETSTOCK is a solution that helps companies reduce excess inventory and free up working capital while minimising stock-outs and increasing revenue. It provides visibility of inventory level and investment, produce quality forecasts and optimal replenishment recommendations.
