

# ABM

## Additional modules available

### CUSTOMER RELATIONSHIP MANAGEMENT (CRM)

ABM Customer Relationship Management (CRM) Software is a powerful customer centric system, aimed at simplifying tasks such as client management, marketing, lead tracking and customer analysis.

With full integration of the ABM accounting system, and driven by a robust SQL database, the CRM software module provides a unique platform for accessing and utilising all your customer and supplier information.

### ALCHEMEX

Advanced Business Manager's powerful reporting module, ABM Alchemex, gives your business the competitive edge by enabling quick and easy access to real-time information needed for operations and strategic planning.

Effortlessly create reports and analyze data from Advanced Business Manager With ABM Alchemex you can spend more time focusing on information analysis and interpretation and less time pulling the data together.

### WAREHOUSING

ABM's Warehousing module provides logical control and organisation of stock, allowing users to create a hierarchal structure in each warehouse with multiple aisles, levels and a waiting area for goods not yet put away.

The module allows stock to be easily transferred between bins and locations using drag and drop.

### STRUCTURED STOCK

ABM Structured Stock module caters for businesses whose stock fits within the Style/Colour/Size model. For example a specific product type, such as a shoe, is referred to as a Style. This product can then be stocked under many colours, sizes or userdefined attributes, allowing the module to cater for a range of industries with segmented stock structures or service offerings.

In the module, a "Style" is represented in a spreadsheet like grid called a matrix. Each Style is broken down into multiple stock items represented by the combination of product attributes, such as colours and sizes.

### BRANCH MANAGEMENT

ABM Branch Management module allows you to effectively control operations over a multi-branch organisation.

Manage user permissions by branch, set up specific bank accounts, customer (debtor) and supplier (creditor) lists and even control the visibility and allocation of stock across multiple locations.

# INTRODUCING A FULLY INTEGRATED BUSINESS & ACCOUNTING SOLUTION

## DOCUMENT MANAGEMENT (ATTACHMENTS)

ABM Document Management and Attachments provides you with a simple and straight forward method to help users overcome the problem of accessing and storing relevant documents.

With ABM Document Management and Attachments, customer, supplier, product, ledger and job records may have an unlimited number of mixed media type of attachments attached, including email, PDF, MS Word and MS Excel files.

## FIXED ASSETS

ABM Asset Management provides you with comprehensive tracking of all assets within your business. Simple yet flexible are basic concepts of the system, allowing you to free your time and resources.

The software caters for many different types and combinations of assets, with extensive reporting and costing options available. It also features a fully integrated lease module to manage various types of leases from Finance, Operating to Hire Purchases.

## IMPORT COSTING

ABM's Import Costing module is ideal for businesses that need to automatically calculate the landed costs of imported inventory, by constructing 'shipments' from single or multiple existing purchase orders.

Based on the newly calculated unit cost, mark-up methods can also be set. When the costs have been finalised and the goods received, the shipment is then processed to update the inventory and purchase order files.

## INTERCOMPANY TRANSACTIONS

ABM's Intercompany Transactions module is a powerful tool that can automatically create a number of related transactions triggered from one transaction.

When the invoice to the client is created, a sales invoice is automatically created in Company "B" to Company "A" and a purchase invoice is automatically created in Company "A". All prices, currencies and margins are respected.

One company may buy products from a related entity an example would be that Company "A" could sell and invoice to a client.

This results in more efficient and accurate data entry for your organisation.

## ABM ECOMMERCE

Designed for companies looking to promote and sell their products or services online, ABM's eCommerce creates an intuitive web site easily tailored to a range of business scenarios.

It allows businesses to define how they trade with existing and potential customers, by showcasing products and providing a smooth channel for customer purchases. The resulting website handles both account and retail type customers, as well as branch offices and remote sales

## TIMESHEET FOR ABM

The Job and Timesheeting system offers a high level of management, control and fast data entry of timesheets against jobs using flexible and efficient entry methods.

The TMS simplifies this process in a scalable, easy to deploy, and highly intuitive software solution.

## EDI - SALES OR PURCHASES

Electronic Data Interchange (EDI) is a computer-to-computer exchange of business documents in a standard electronic format.

Orders are placed and confirmed automatically, prices are accurately confirmed and agreed upon, deliveries and back orders are handled according to trading policies and the human error factor is almost 100% eliminated.

# INTRODUCING A FULLY INTEGRATED BUSINESS & ACCOUNTING SOLUTION

## ASPLURIS

ASPluris's mobile supply chain management system integrates directly to the ABM core accounting system, ensuring real-time visibility across the entire system.

ASPluris services a number of markets from warehousing, logistics and supply chain through to manufacturing, engineering, 3PL, construction and contracting through a number of flexible modules that range from dispatch, receiving and transfer of stock to stocktake and stock adjustment.

ASPluris runs on a handheld data capture terminal or tablet which has the ability to read barcodes and RFID tags, speeding up data entry and ensuring accuracy.

If your business needs a system for your warehouse, shop floor or even out on the field, ASPluris is always connected to the enterprise system through a web services application. picking errors and reduced order picking time.

## ABM MANUFACTURING

ABM's Manufacturing management system is a powerful software suite designed to simplify the process of planning and managing production processes.

Integrating accounting, production, ordering, and inventory management, the system can control all aspects of the production and involved accounting process via an intuitive, user friendly interface.

## ABM SERVICE

ABM Service Management is ideal for businesses who supply on-site service to their clients. It is applicable to a wide range of service industries such as equipment servicing, monitoring, field engineers, security, on-site services, tradesman, etc.

The system allows tracking of a firm's personnel by time expenditure and revenue, monitors and dispatches calls to mobile personnel, logs client service history, and provides customer billing and reporting functionality.

## DOCUMENT SERVER

The module allows the workload for time intensive document generation to be moved from an individual work station to a designated document server.

The module also enables consolidation of multiple forms into a single email or fax for convenience and size requirements.

## ABM POS

ABM POS (Point of Sale) is a simple, yet intuitive, sales entry system. Linked directly to the general ledger, the system allows entries with full accounting integration and transaction posting.

ABM POS connects to strip printers, cash drawers and card payment machines and has full access to stock and customer information within the accounting system.

## SPNET

SpNet is an e-commerce module that links directly to ABM. It allows customers to view and purchase your products on the web as well as many other options.

SpNet can link to your existing web site as a simple e-commerce shop or it can be integrated with the powerful open source Drupal CMS for a full featured integrated web site.

# INTRODUCING A FULLY INTEGRATED BUSINESS & ACCOUNTING SOLUTION

## PICKING SLIP MANAGEMENT

The ABM Picking Slip Management module allows you to manage and print picking slips from existing sales orders in ABM.

This module is used in a variety of ways, but most commonly to help manage the distribution of stock that has been received among the back-orders requiring that stock.

In a typical scenario, the user receives stock that he has ordered. At some point very soon after, the report is run showing the orders still waiting for the stock items that have been received.

Having run the report, picking slips can for those orders be printed for packing and shipping.

## PICK N PACK

Pick 'n' Pack involves identifying the goods to be dispatched, physically picking them from stock or warehouse shelves, wrapping and packaging the goods and producing delivery dockets / invoices.

It is particularly useful in warehouse environments where the goods to be despatched are unable to be presented in either order or picking slip sequence.

The Pick 'n' Pack method of data entry can facilitate the entry of despatch details in any sequence.

The Pick 'n' Pack module is a specialised entry process and as such does not allow manipulation of the original order or any variation entry. All unsupplied items remain on backorder.

When Save & Close is selected the resultant invoice is processed in the normal ABM manner.

## UNPACK AND STACK

Unpack 'n' Stack is custom designed to facilitate the receipting of purchase orders into the warehouse. This involves identifying the goods as they are unpacked, allowing the store-person to scan individual items regardless of the sequence they appear on existing paperwork.

This is particularly useful when the goods appearing on a single order line are distributed across several packages or palettes. Unpack 'n' Stack allows the user to scan them as they come and will collate them on the fly.

Although Unpack 'n' Stack is designed for use with a barcode scanner, it can be switched to manual mode and allows the user to search for product codes and enter line quantities.

On completion of entry, Unpack 'n' Stack performs all the necessary postings to the ABM database.
