

ABM

Mobile Timesheet Application

OVERVIEW

The ABM Timesheet mobile application allows iOS and Android device users to receive job notifications in the field, and to record time and costs without ever setting foot in the office.

This allows staff that are primarily out of the office to record their time using a simple application which automatically uploads data to the system, ensuring timesheets are never lost again.

By having staff enter their time as they are working, accuracy and timeliness of the information is improved.

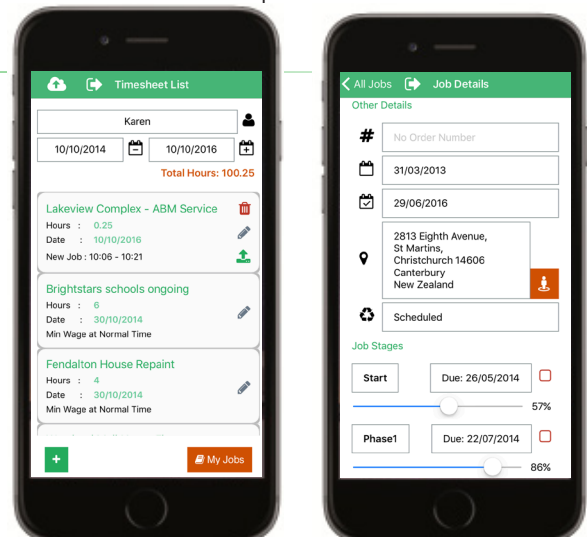

This would allow improved job management and staff can immediately see if time and costs are exceeding estimates, or if the project is falling behind schedule, allowing remedies to be put in place. Also, typical administration tasks such as progress invoicing can take place without having to constantly chase information.

FEATURES

- » Advanced Mobile Timesheet (AMT) Application seamlessly integrates with ABM's core accounting system
- » Staff can add notes directly along with their timesheet entry
- » Operates with both iOS and Android or a combination of both
- » Staff can enter their time and costs no matter where they are
- » Times can be entered either as start/end times or just total hours
- » Allows for the use of multiple labour rates

BENEFITS

- » Access ABM anytime, anywhere
- » Easy and efficient timesheet management
- » Improved invoice accuracy and timeliness, resulting in better cashflow
- » Improved information capture
- » Reduce loss of revenue from misplaced information
- » Eliminate double entry
- » Access to critical information when needed
- » Access available offline and automatically syncs when an internet connection is available
