A B M
Project Invoicing

ABM — ADVANCED BUSINESS MANAGER

OVERVIEW

The ABM Project Invoicing module allows you to invoice charges to a job according to variable criteria, allowing fast flexible invoice creation for customer projects and jobs. It lets the user choose the amount to invoice, and the value of work in progress to be written off.

Whilst the module will primarily be used where a job spans over a period of time, and is invoiced in stages, it can also be used for smaller jobs where an itemised invoice is needed.

BENEFITS

» Keeps track of previous invoice values

» More visibility of cash flows from clients

» Minimise the time spent on itemised invoices

» Produces clear invoices with required level of detail

FEATURES

EFFORTLESS INVOICING

The module simplifies the procedure by using a step-by-step Wizard which requests relevant variable criteria before creating the invoice.

FLEXIBLE INVOICING

Choose your own invoice structure and display options, select which charges to include and finalise retention amounts on projects. Build your invoice to suit.

PROFORMA INVOICES

Use the module to generate pro-forma or draft invoices, have your clients accept them, then process the tax invoice. Improve the workflow from quote to invoice processing.

ANYTIME INVOICE CREATION

The module speeds up accurate and professional invoice procedures at any stage of a project or job, allowing the business to free-up valuable time resources and provide confidence in invoicing accuracy.
